

Machine Learning vs. Deep Learning Explained

Understanding the differences between machine learning and deep learning can help businesses make informed decisions in AI implementation strategies.

Before Learning: Traditional Programming

- Human writes rules
- Machine follows directions
- No learning involved

Machine Learning

- Do you have a large amount of already labeled data?
- Do you need to deploy your product at scale?
- Machine learning might be right for you!

Deep Learning

- Do you need real-time decisions from live data?
- Does it need to react to input as it happens?
- Deep learning might be right for you!

CHOOSE THE RIGHT TOOL FOR YOUR PROBLEM.
